Program: S329DEPR.SAS  
By:  
Date: 28-AUG-97

Type: Table

REDACTED

Description: Paroxetine 329 - GLM analyses for mean change from baseline  
and creation of tables for ITT efficacy var  
HAMD DEPRESSION ITEM

ACUTE PHASE

Files Included: SETUP329.INC  
M\_GLMPR.SAS

Tables Accessed:

Data Sets Accessed: HAMD329

Permanent Data Sets Created:

SAS Version: 6.08  
Input Parameter: SYSPARM = 329  
Output file: S329DEPA.LIS, S329DEPC.LIS  
S329DEPR.PRT

Update:

```
*****;  
*include 'bio_code:stdinit.sas';  
*stdinit;  
*****  
* Initial set up commands to create libnames and macros for output data set, *  
* output file, protocol, table number, population type (ITT or per-protocol) *  
* and population title text *  
* Defines output file (.PRT) to print PROC GLM results *  
*****;  
  
*let file=S329DEPR.SAS;

Week 8	67	-2.21 (0.17)	56	-1.76 (0.18)	66	-1.54 (0.17)	0.003	*	0.358
Endpoint	90	-2.00 (0.14)	94	-1.62 (0.14)	87	-1.33 (0.14)	0.001	*	0.135

Treatment differences and p-values are computed using analysis of variance with a model including effects for treatment and investigator.

\* - significantly different from placebo for alpha = 0.05

HAMD Depressed Mood Item is HAMD Item 1
