Subject: Worldwide data regarding DKA and pancreatitis and NMS

The olanzapine spontaneous database was searched worldwide from Oct 1st 1996 to March 24 2002. with the following results:

Cases with events = 19,953

MedDRA Preferred Term	Number of Cases	Percent of Cases
Diabetic Ketoacidosis	88	0.44%
Pancreatitis Acute	17	0.09%
Pancreatitis Hemorrhagic	4	0.02%
Pancreatitis Necrotising	4	0.02%
Pancreatitis NOS	33	0.17%
Total:	135	

Eleven of the 88 DKA cases had a diagnosis of pancreatitis. As Patrizia has pointed out, it is common to see elevations of lipase and amylase with DKA which do not represent pancreatic damage but rather a decreased clearance of these enzymes.

MedDRA Preferred Term	Number of Cases	Percent of Cases
Diabetic Ketoacidosis	88	.44%
Neuroleptic Malignant Syndrome	303	1.52%
Total:	389	

Two cases of DKA had a diagnosis of NMS.

Let me know if you have questions.
