Patrizia is the expert. Weight accounts for some, but not all increase in glucose.

Subject: Weight gain & blood sugar levels : is there a correlation ?

Gentlemen

I hope you can help if possible , with this question . I am getting asked by some very senior clinicians here in Europe if there is any correlation in those patients on Zyprexa putting on weight & concomitantly seeing a parallel rise in their blood sugar levels ?

I suppose their concern is - is there a direct connection between any weight gain induced by Zyprexa & hyperglycaemia/diabetes .

This is of course something both Janssen / Pfizer are trying to create an issue around & its interesting to see that Janssen have a full satellite symposia at APA this year devoted to Atypical & Diabetes.

Thanks

Regards,Ernie
